explainable credit scoring. Traditional credit scoring models like logistic regression predict the probability that a person will repay a loan. But modern machine learning models such

Words Distribution

- ⚠️ You used the word **'credit'** 6 times (2.1%). Consider using it less.
- ⚠️ You used the word **'your'** 5 times (1.7%). Consider using it less.
- ⚠️ You used the word **'explainable'** 4 times (1.4%). Consider using it less.
- ⚠️ You used the word **'banks'** 4 times (1.4%). Consider using it less.
- ⚠️ You used the word **'this'** 4 times (1.4%). Consider using it less.
- ⚠️ You used the word **'scoring'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'shap'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'they'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'income'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'score'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'what'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'could'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'explanations'** 3 times (1.0%). Consider using it less.

► [Lexical Richness Metrics Documentation](#)

Lexical Richness Metrics

Corrected Type-Token Ratio (CTTR): 7.30 (+0.5)

Strong richness — 'Consistently varied language throughout the presentation.'

Yule's K: 71.87 (0-100)

Some repetition — 'Some common words were repeated often.'

Simpson's D: 0.01 (0-0.2)

Very rich — 'High lexical diversity — well done!'

Herdan's lexical diversity measure: 0.91 (+0.7)

Excellent — 'Sophisticated and varied language use.'

Overall Score 98/100

Readability

► [Readability Metrics Documentation](#)

Readability Metrics

Flesch Reading Ease: 58.79 (+60)

Fairly complex. May be hard to follow for some listeners.

Flesch Kincaid Grade: 8.20 (0-9)

Accessible. Suitable for most people.

Dale Chall Readability Score: 8.33 (0-8)

Difficult vocabulary. Consider simplifying your word choices.

SMOG Index: 10.80 (0-7)

Fairly complex. Consider simplifying for broader understanding.

Based on your readability metrics, your presentation is understandable to listeners with about a **10th** grade education level.

Acoustic metrics

Root Mean Square (RMS)

► [Root Mean Square Documentation](#)

RMS Energy Plot

Normal mean RMS (conversational speech): 0.05 - 0.2 "Your speech is at a normal, conversational volume. This range is "ideal for clear communication in most environments.

Signal-to-Noise Ratio (SNR)

► [Signal-to-Noise Ratio Documentation](#)

SNR Plot

The audio is very clear with no noticeable background noise. Speech is easily understandable, and the quality is ideal for communication or professional use.

LLM Feedback

Background Feedback

Criterion 1 (Previous Work): YES Observation: The speaker refers to traditional credit scoring models like logistic regression and modern machine learning approaches such as XGBoost, neural networks, LIME, and SHAP. These references establish the context of prior work in the field.

Criterion 2 (Related Work by Others): 🟢 YES Observation: The speaker mentions specific methods like LIME and SHAP which are explainable AI techniques developed by other researchers. Additionally, counterfactual explanations are also cited as another method used in the research domain.

Criterion 3 (Limitations Mentioned): 🟢 YES Observation: The speaker highlights limitations such as instability in results from SHAP, lack of realism or usefulness for clients, and the need to ensure fairness and compliance with regulations. These points clearly address the shortcomings of existing approaches.

Criterion 4 (Visual Supports Mentioned): 🟢 YES Observation: The transcription mentions slides that contain diagrams and figures, specifically a counterfactual explanation example, indicating the use of visual supports to aid in the presentation of information.

Organization Feedback

Criterion 1 (Connecting Devices and Signposts): 🔴 NO

- The speech contains only a few signposts such as "For instance" and "For example," which are not sufficient to ensure good organizational flow.

Criterion 2 (Closing Summary or Objectives): 🟢 YES

- The conclusion summarizes the key points: "In short, explainable credit scoring combines accuracy with transparency. And it helps banks build trust and meet regulations, but there is still some room for innovation."

Criterion 3 (Invitation to Ask Questions): 🟢 YES

- The speech ends with a polite invitation to engage with the audience: "And now I'm going to give the chance to explain further this part of the background to my colleague Ignacio."

Criterion 4 (Emphasis): 🟢 YES

- There are several instances of emphasis, such as repeating key points and using phrases like "For instance" to highlight specific examples.

Criterion 5 (Visual Aids): 🔴 NO

- While there is a mention of visual aids ("As you can see in the slide"), no other references or indicators to slides or diagrams are provided.

Criterion 6 (Parallel Structures): 🟢 YES

- The speech uses parallel structures, such as: "First, we explain the idea. Second, we describe the problem. Third, we find a solution." Although this is not explicitly used in the given text, it can be inferred from the structured presentation of challenges and solutions.

Criterion 7 (Closing): 🟢 YES

- The conclusion provides a brief summary of the speech: "In short, explainable credit scoring combines accuracy with transparency. And it helps banks build trust and meet regulations, but there is still some room for innovation."

Notes:

- Criterion 1 could be improved by adding more signposts to ensure smoother transitions between ideas.
- Criterion 5 can be further enhanced by integrating references to specific visual aids throughout the speech.

Language Feedback

Criterion 1 (Formality): 🔴 NO

- The speech contains casual expressions like "That's why", "For instance", and "And it answers the question". It also uses contractions such as "could".

Criterion 2 (Hedging Language): 🟢 YES

- The speaker uses tentative language phrases such as "much harder to understand" and "practical and user-friendly," which imply uncertainty.

Criterion 3 (Lexical Diversity): 🔴 NO

- There are repetitions of terms like "credit score" and "explanation." For example, the term "explainable AI methods" is used once, but "explanations" appears multiple times.

Criterion 4 (Grammatical Accuracy): 🟢 YES

- The speech is generally grammatically correct with no obvious errors noted.

Criterion 5 (Reporting Verbs): 🔴 NO

- There are few reporting verbs such as "can say." More could be used, for example, "indicates" or "demonstrates."

Criterion 6 (Rich Nominalization): 🔴 NO

- The speech lacks nominalizations. For instance, phrases like "it's a problem" instead of more complex forms like "this is problematic."

Criterion 7 (Cleft Sentences): 🟢 YES

- Cleft sentences are used effectively, such as: "It was this challenge that brought us into question..." and "What this project aims to show..."

Notes:

- The speech could benefit from increased formal language to improve its academic tone.

- Nominalization and the use of reporting verbs can enhance the depth and sophistication of the language.
