Hello, my name is Carmen, and I will now walk you through the description of our system. Our core objective is to deploy an explainable AI platform providing SMEs with transparent

Evaluation Results:

Words Distribution

Words Distribution

- ⚠️ You used the word **'with'** 5 times (1.7%). Consider using it less.
- ⚠️ You used the word **'financial'** 5 times (1.7%). Consider using it less.
- ⚠️ You used the word **'system'** 4 times (1.3%). Consider using it less.
- ⚠️ You used the word **'core'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'simulation'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'like'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'data'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'model'** 3 times (1.0%). Consider using it less.
- ⚠️ You used the word **'this'** 3 times (1.0%). Consider using it less.

Lexical Richness

► [Lexical Richness Metrics Documentation](#)

Lexical Richness Metrics

Corrected Type-Token Ratio (CTTR): 7.63 (+0.5)

🟢 Strong richness — 'Consistently varied language throughout the presentation.'

Yule's K: 92.22 (0-100)

🟡 Some repetition — 'Some common words were repeated often.'

Simpson's D: 0.01 (0-0.2)
🟢 Very rich — 'High lexical diversity — well done!'

Herdan's lexical diversity measure: 0.92 (+0.7)
🟢 Excellent — 'Sophisticated and varied language use.'

Overall Score 81/100

 Readability

► [Readability Metrics Documentation](#)

Readability Metrics

Flesch Reading Ease: 20.79 (+60)
🔴 Very difficult. Try using shorter sentences and simpler words.

Flesch Kincaid Grade: 14.50 (0-9)
🔴 Advanced. Suitable for academic or expert audiences.

Dale Chall Readability Score: 11.33 (0-8)
🔴 Difficult vocabulary. Consider simplifying your word choices.

SMOG Index: 15.70 (0-7)
🔴 Advanced. Suitable for expert or academic settings.

Based on your readability metrics, your presentation is understandable to listeners with about a **15th** grade education level.

 Acoustic metrics

Root Mean Square (RMS)

► [Root Mean Square Documentation](#)

RMS Energy Plot

🔴 Low mean RMS (soft speech, whispers): 0.01 - 0.05 Your speech is quite soft or whispered. Consider speaking a bit louder to improve clarity, especially in environments with background noise.

Signal-to-Noise Ratio (SNR)

► [Signal-to-Noise Ratio Documentation](#)

SNR Plot

🟢 The audio is fairly clear, but there's noticeable background noise. While the speech is still understandable, the quality can be improved for a better listening experience.

 LLM Feedback

Description Feedback

Criterion 1 (Architecture Mentioned): 🔴 NO Observation: The speaker does not mention any specific architectural components, diagrams, workflows, or images related to the application's structure.

Criterion 2 (Data Flow Mentioned): 🟢 YES Observation: The speaker mentions data sources and flow in the context of integrating core financial and microeconomic data into a machine learning model. They also refer to real-time explanations generated from this data.

Criterion 3 (Algorithms or Libraries Mentioned): 🟢 YES Observation: The speaker discusses the use of post-hoc methods such as SHAP or LIME for interpretability, which are algorithms. Additionally, they mention pairing with an XAI library, indicating the use of libraries in the system.

Criterion 4 (Limitations Mentioned): 🟢 YES Observation: The speaker acknowledges limitations by mentioning data availability and secure SME sharing as main assumptions, as well as the challenge of model drift due to changing economic conditions.

Criterion 5 (Infrastructure Mentioned): 🟢 YES Observation: The speaker mentions the need for a robust cloud platform like Google Cloud or AWS for handling instantaneous computation.

Organization Feedback

Criterion 1 (Connecting Devices and Signposts): 🔴 NO

- The speech lacks explicit signposts or connecting devices. There are no clear transitions or logical connections between ideas.

Criterion 2 (Closing Summary or Objectives): 🔴 NO

- The speech does not close with a summary of the contributions or mention the objectives of the proposal. It ends abruptly without revisiting key points or summarizing the main goals.

Criterion 3 (Invitation to Ask Questions): 🟢 YES

- The speaker invites questions at the end: "And that concludes the description of our system."

Criterion 4 (Emphasis): 🔴 NO

- There is minimal use of emphasis. Words like "core," "crucially," and "actively" are used, but they are not repeated or highlighted in a way to emphasize key points.

Criterion 5 (Visual Aids): 🔴 NO

- The speech does not mention any visual aids such as slides, diagrams, or figures.

Criterion 6 (Parallel Structures): 🟢 YES

- There is an attempt at parallel structures: "Our methodology is built on two concepts: XAI and financial empowerment as education." However, the parallel structure is only used once in this excerpt. It would be more effective if it were consistently applied throughout.

Criterion 7 (Closing): 🔴 NO

- The speech does not conclude with a proper closing summary or reiteration of problems and contributions. It ends without providing a final summary.

Notes:

- **Connecting Devices and Signposts:** The speech could benefit from the inclusion of signposts to help guide the audience through the presentation.
- **Closing Summary or Objectives:** A concise summary at the end would reinforce the main points and objectives, making the speech more effective.
- **Emphasis:** While some words are used emphatically, there is no consistent use of repetition or strong phrasing to highlight key ideas.

Language Feedback

Criterion 1 (Formality): 🟢 YES

- The speech avoids slang and contractions.
- There are no casual expressions or gap fillers.
- Vocabulary is appropriate for an academic setting.

Criterion 2 (Hedging Language): 🔴 NO

- The speech lacks hedging phrases. For example, it could include "it seems" or "could be" to soften some of the claims.

Criterion 3 (Lexical Diversity): 🟢 YES

- The speech uses a variety of terms and avoids repetition.
- Terms such as "core objective," "transparent credit ratings," "personalized insights," "simulation tool," "explainable AI platform," "financial empowerment," and "explanation" are used to convey the system's features.

Criterion 4 (Grammatical Accuracy): 🟢 YES

- The speech is grammatically correct with no obvious errors.
- Sentence structures are varied, making it easy to follow.

Criterion 5 (Reporting Verbs): 🔴 NO

- There are no reporting verbs such as "suggest," "demonstrate," or "highlight" used in the speech.

Criterion 6 (Rich Nominalization): 🟢 YES

- Adjectives and verbs are transformed into nouns where appropriate, such as "interactive simulation mode" instead of saying it repeatedly.
- Examples include: "explanation," "dashboard," "score," "factor impact diagram," "benchmarking filter."

Criterion 7 (Cleft Sentences): 🔴 NO

- The speech does not use cleft sentences to express emphasis. For example, "It was this challenge that brought us into question..." or similar structures are absent.

Notes:

- Formality is maintained throughout the presentation.
- Lexical diversity and nominalization add depth to the description.
- Grammatical accuracy is present but can be enhanced by incorporating hedging and reporting verbs for academic rigor.
