Let's start with a quick image. Imagine trying to judge the strength of a company like Meta, but you're only allowed to use data from 2005, before Facebook even had ads or mobile...

Evaluation Results:

Words Distribution

Words Distribution

- ⚠️ You used the word '**credit**' 12 times (3.8%). Consider using it less.
- ⚠️ You used the word '**data**' 4 times (1.3%). Consider using it less.
- ⚠️ You used the word '**that**' 4 times (1.3%). Consider using it less.
- ⚠️ You used the word '**even**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**that's**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**they**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**this**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**scores**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**financial**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**systems**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**when**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**average**' 3 times (0.9%). Consider using it less.
- ⚠️ You used the word '**these**' 3 times (0.9%). Consider using it less.

Lexical Richness

► Lexical Richness Metrics Documentation

Lexical Richness Metrics

Corrected Type-Token Ratio (CTTR): 8.20 (+0.5)

● Strong richness — 'Consistently varied language throughout the presentation.'

Yule's K: 54.59 (0-100)

● Low repetition — 'Your vocabulary was well-distributed and not overly repetitive.'

Simpson's D: 0.01 (0-0.2)

● Very rich — 'High lexical diversity — well done!'

Herdan's lexical diversity measure: 0.92 (+0.7)

● Excellent — 'Sophisticated and varied language use.'

Overall Score 100/100

Readability

► [Readability Metrics Documentation](#)

Readability Metrics

Flesch Reading Ease: 50.23 (+60)

● Fairly complex. May be hard to follow for some listeners.

Flesch Kincaid Grade: 9.40 (0-9)

● Moderately complex. Best for high school or above.

Dale Chall Readability Score: 9.31 (0-8)

● Difficult vocabulary. Consider simplifying your word choices.

SMOG Index: 11.30 (0-7)

● Fairly complex. Consider simplifying for broader understanding.

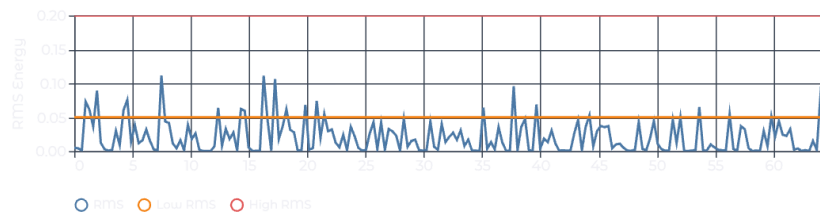

Based on your readability metrics, your presentation is understandable to listeners with about a **10th** grade education level.

Acoustic metrics

Root Mean Square (RMS)

► [Root Mean Square Documentation](#)

RMS Energy Plot

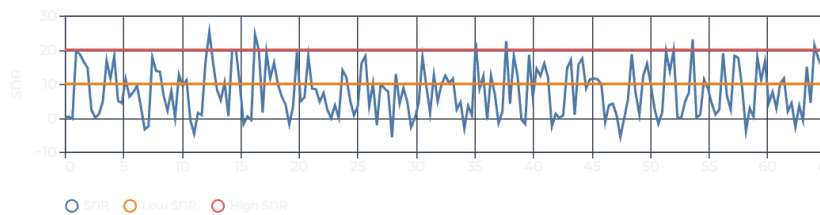

● Low mean RMS (soft speech, whispers): 0.01 - 0.05 Your speech is quite soft or whispered.

Consider speaking a bit louder to improve clarity, especially in environments with background noise.

Signal-to-Noise Ratio (SNR)

► [Signal-to-Noise Ratio Documentation](#)

SNR Plot

● The speech is clear and easy to understand, though there might be slight background noise.

Overall, it's good quality for most uses, though a little enhancement could make it perfect.

LLM Feedback

Introduction Feedback

Criterion 1 (Attention Grabber): ● YES

- The introduction starts with a vivid scenario that immediately engages the audience, drawing them into the topic of credit scoring and its limitations.

Criterion 2 (Topic Introduction): YES

- The speech clearly introduces the main topic of improving credit scoring systems using AI, setting up the context for the research being presented.

Criterion 3 (Structural Outline): YES

- The introduction hints at future sections by mentioning "the background and key studies that inspired our proposal," which aligns with the planned structure.

Organization Feedback

Criterion 1 (Connecting Devices and Signposts): NO

- The speech lacks clear signposts or connecting devices. There are no transitional phrases or logical connections between ideas that would help the audience follow the flow of the presentation.

Criterion 2 (Closing Summary or Objectives): NO

- While the speech does not explicitly summarize contributions, it could have benefited from a closing statement that ties back to the main points discussed. The objective was introduced but not revisited in conclusion.

Criterion 3 (Invitation to Ask Questions): YES

- The speech concludes with an invitation for questions: "Now that we understood why traditional credit models are inadequate, I now hand it over to Samuel, who will explain the background and the key studies that inspired our proposal."

Criterion 4 (Emphasis): NO

- The speech does not show much emphasis through repetitions of words or specific phrasing like "As we have explained" or "The most important idea is." Key points are mentioned but lack this level of reinforcement.

Criterion 5 (Visual Aids): NO

- There is no mention of visual aids in the provided text. Phrases such as "Imagine trying to judge the strength of a company like Meta, but you're only allowed to use data from 2005" and "Here we can see average credit scores by race in the United States" might imply the presence of visuals, but they are not explicitly stated.

Criterion 6 (Parallel Structures): NO

- The speech does not respect parallel structures in its enumerations or listings. For example, it jumps from a broad overview to more specific points without maintaining consistent structure.

Criterion 7 (Closing): YES

- The speech concludes properly by handing over to the next speaker: "Now that we understood why traditional credit models are inadequate, I now hand it over to Samuel, who will explain the background and the key studies that inspired our proposal."

Notes:

- Criterion 1 is lacking in signposts and transitions.
- Criterion 2 would have been better if a summary was included.
- Criterion 3 provides an invitation for questions but no explicit recap of main points.
- Criterion 4 shows some attempts to emphasize certain points, but not enough.
- Criterion 5 does not explicitly mention visual aids despite suggestions in the text.
- Criterion 6 lacks consistent parallel structures.
- Criterion 7 properly concludes by handing over the presentation.

Language Feedback

Criterion 1 (Formality): NO

- The transcript contains casual expressions such as "right?" and filler words like "that's the daily reality for many credit analysts."
- It also uses some colloquial terms that are not formal.

Criterion 2 (Hedging Language): YES

- The speech employs hedging or tentative language, such as "almost meaningless," "often based on," and "These differences aren't just numbers; they show how."

Criterion 3 (Lexical Diversity): NO

- There are repetitions of terms like "credit" and "creditworthiness."
- Some phrases could be more diverse, e.g., using synonyms for "system."

Criterion 4 (Grammatical Accuracy): YES

- The transcript is mostly grammatically correct.
- There are minor issues with word choice but no major grammatical errors.

Criterion 5 (Reporting Verbs): NO

- While the speech uses some reporting verbs like "demonstrates," it could benefit from more varied use of such terms.

Criterion 6 (Rich Nominalization): YES

- The transcript includes rich nominalizations, for example: "creditworthiness" and "fairness-aware models."

Criterion 7 (Cleft Sentences):  NO

- There are no clear examples of cleft sentences used to express emphasis.

Notes:

1. **Formality:** The speech could benefit from avoiding casual expressions and filler words.
2. **Lexical Diversity:** More varied vocabulary would enhance the richness of the language.
3. **Reporting Verbs:** Increasing the use of reporting verbs can improve academic rigor.
4. **Cleft Sentences:** Incorporating cleft sentences might add emphasis and structure to some parts of the speech.

Highlighted Words

Let's start with a quick image. Imagine trying to judge the strength of a company like Meta, but 
For decades, creditworthiness has been defined by systems like the FICO score, which is based on
So, when these same systems are used with sole financial records, these results become even more
Now that we understood why traditional credit models are inadequate, I now hand it over to Samuel
