

Research Proposal Assessment Rubric

1 = Excellent performance. Exemplary, skilled, marked by excellence.

0,75 = Good performance. Competent, effective, accurate and clear, but lacks the exemplary depth, precision, and insight of excellent performance.

0,5 = Average performance. Satisfactory, but lacks accuracy and effectiveness.

0,25 = Below the average performance. Inconsistent, ineffective; shows a lack of consistent competence.

0 = Bad performance. Unskilled and insufficient.

Issue	Description	Score from 0 to 1
Sections and content (50%)	Title (5%) The title contains all essential keywords of the research and encapsulates the essence of the paper	
	Motivation (10%) - The research territory is well established (by showing that the general research area is important, central, interesting, and problematic in some way) - Sufficient references to works, studies, statistics, etc., are provided that justify the interest and centrality of the research topic - The main concepts are appropriately introduced and defined - Main current practices are summarised and main research gaps briefly mentioned - The specific objective of the RP is defined and potential implications to the field are highlighted - The structure of the remainder of the paper is provided	
	Background (10%) - The background of the research (state-of-the-art) provides a critical account of what has been achieved so far (what is the gap? Why are existing solutions not good enough? Are the limitations of current approaches clearly stated?) - Previous works are appropriately described and referenced - The research problem is clearly identified, and logically emerges from the background - The solution is briefly mentioned and contributions are emphasized	

	Innovation (10%) • The main aim of the research is clearly defined • The way in which your research idea or solution will cover the existing gaps is described (competitive advantage of your solution) • The technology that lies behind your proposal is briefly mentioned (type of technology)	
	Description (10%) • The main aim of the research is clearly defined • The way in which the existing gaps are covered by your research idea is stated (competitive advantage) • The technology that lies behind your proposal is clearly specified (type of technology and how it is going to be applied) • A description of the research idea from a developer's perspective is provided (design concept, architecture) • A description of the research idea from a user's perspective is provided (functioning and use) • Assumptions and limitations of your research idea are clearly stated (real evidence that your proposal is achievable is included)	
	Figures and Tables (5%) • Figures and tables are elaborated to illustrate the solution and contribute to its understanding (especially in the description section for design concept, architecture, functioning & use, etc.)	
Academic Writing (50%)	Organization and flow of information (coherence & cohesion) (20%) • All information is located in the appropriate section • Information is presented in a logical way that is easy to follow • Ideas are sequenced within paragraphs and there is a smooth transition between paragraphs (inter-and intra-coherence) • There are no isolated sentences not properly connected with • Appropriate use of connectors and connecting devices	
	Style (10%) • Formal academic writing is used • Use of tentative language • The use of personal pronouns is avoided and passive voice is used when appropriate (impersonal style)	

	• No contractions, phrasal verbs, or colloquial language are used • Precise, specialist language is used • Personal beliefs or emotions are avoided (objective style)	
	Citation and References (10%) • Plagiarism is avoided • All information that is not original is appropriately cited (direct citation or paraphrased) • The use of generative AI is acknowledged by including a paragraph that describes the tools used and how they were applied within the document. (i.e. "In section 1, GPT was used to get ideas for introducing the topic of the RP"; "In section 2, GPT was employed to translate/paraphrase paragraphs 2 and 3") • A considerable number of authoritative sources of information is used to justify claims (min. 5 sources) • References are consistently used in the text according to the selected style (APA or IEEE citation style)	
	Format and aesthetics (5%) • The names of the authors and the group number are included on the first page • All pages are numbered • Consistent format (no more than 2 font types, main text has the same font size, line spacing is consistent, margins justified) • Tables and figures are correctly numbered • Tables and figures are mentioned and discussed in the text • Sources for tables and figures are included in the reference section according to the citation style	
	Sentence skills (5%) • There are no spelling mistakes (no mixture of British and American spelling) • Correct grammar is used • Correct and effective sentence structures (avoiding the use of run-ons, sentence fragments and comma-splices) • Writing assistants have been used to avoid major grammar and style errors	

Overall Score ____/10__
